

Students will:

- Apply math in other content areas and situations, as relevant (math is not just for math class)
- Choose the right math concept to solve a problem when not necessarily prompted to do so
- Use the Standards of Mathematical Practice to apply the skills and concepts you learned in math to solve real-world problems

Teachers will:

- Apply math including areas where its not directly required (i.e. science)
- Be explicit about teaching and assessing students use of the Standards of Mathematical Practice as they solve real-world problems
- Provide students with real world experiences and opportunities to apply what they have learned
