

Students will:

- Practice math skills with an intensity that results in **fluency**
- Practice math concepts with an intensity that forces **application** in real world situations
- Recognize that both fluency and application are critical to being mathematically proficient

Teachers will:

- Require the dual intensity of understanding and practice **within different periods and different units**
- Be ambitious in demands for **fluency and practice** as well as the range of application
- Explicitly communicate to students and parents the importance of dual intensity
